Please note: Irrespective of the breadth of information, advice and problem-solving approaches contained within this book, it cannot replace the visit to a practitioner of alternative medicine or a physician with an interest in naturopathy. Furthermore, please note that traditional orthodox medicine has to date neither accepted nor acknowledged the connections illustrated in this book.

Table of contents

The chapters selected for this extract have been taken over in their entirety from the RAH Compendium. For reasons of clarity, the chapter numbers have therefore not been adjusted.

17. Supporting analysis with test protocols

The idea for test protocols was conceived at the School for Alternative Medicine at the Paul Schmidt Academy. There, you can learn among other things, which organ structures and regulation ranges you have to consider regarding the respective disease. These specifications are also valid for energy testing by means of the RAH. For example, in the case of high blood pressure (hypertension), you should always consider the kidneys because they produce the blood pressure-elevating enzyme renin. The hormonal system is important too, as it has a big influence on the metabolism and the blood

pressure. The new analysis support considers exactly these coherences. For example, if you select the frequency structure of the RAH programme 39.60 Hypertension, you can also choose (by the push of a button) to have a list of all RAH programmes that are linked to this set of symptoms offered for immediate testing. Sometimes this list may include over 50 different areas. The programme version that has been available for the Rayocomp PS 1000 polar 4.0 and the Rayocomp PS 10 already supports 63 disease symptom sets for comprehensive energy testing:

For each of these 63 test protocols there are detailed notes explaining why a given programme should be considered in regard to a given disease or disorder. The naturopath, Ms Bettina Schipper, who is Head of Studies at the Paul Schmidt Academy, a member of the RAH Expert Committee, and who gives presentations on this topic, undertook the task of grouping and describing the individual areas for testing.

The design of the following test protocols is based on the cause-oriented structure that also underpins Bioresonance according to Paul Schmidt. The first step consists of energetic testing, e.g. vitalisation and the meridians involved in the disorder. This is followed by suggestions of possible causal influences, ranging from electrosmog, over nutritional deficiencies, to pollutants. Subsequently, pathogens corresponding to the illness are put forward (based on the work of Mrs Schußmann,

naturopath, and Dr. Schußmann). This is followed by the appropriate ATP programmes devised by Dr. Yayama (Japan), and then all the physiology and pathology programmes. As a final step, suitable detoxification programmes, developed by the naturopath Mr Rögele, are proposed for testing.

These test protocols create a blueprint for analysing as well as harmonising with the RAH. In addition, they serve the purpose of capturing any energy deficits in the most comprehensive way possible.

These test protocols can be accessed in the RAH module of the Rayocomp PS 1000 polar 4.0 and in the module M10 of the Rayocomp PS 10.

You can also record and save the test results on a Green-Card.

18. Pathology RAH compact programmes

When the development of the RAH (Rayonex Analysis and Harmonisation system) began in 2007, no one suspected what a powerful, energetic expert system would emerge. Almost yearly new RAH programmes with regards to analysis and harmonisation are added to the RAH, be it in the human or veterinary field.

The actual RAH is characterised by great individuality as well as many prepared RAH programme sets. This is important for new entrants, but also for experienced users of the system.

The aim can be described as follows: With as little time as possible therapists can achieve the maximum therapeutic success for the clients. Of course, it would be ideal to test all available RAH programmes to come to an individual, cause-orientated analysis and harmonisation. However, daily praxis showed that prepared RAH sets too can be very effectively used for analysis and harmonisation. The advantage: The number of RAH programmes to be tested is reduced significantly.

An example: in the past we asked therapists from several countries which RAH programmes they would test and harmonise in case of hypertension. The results showed that therapists tended to follow their own focus and in doing so ignored many of the therapeutic possibilities of the RAH. Many therapists, also experienced therapists, were not clear about which channels, ATP programmes, pathogens, physiology and pathology programmes, detoxification programmes, etc. were to be tested and harmonised for this disease. But also for new entrants it would be a great help to have clear guidelines of the RAH programmes to be tested and to be able to harmonise based on the test results. Therefore, some years ago, the so-called RAH test protocols were developed. These are RAH programme protocols set up by experts, accurately focused on a specific disease (e.g. hypertension),

optimally suitable for testing and the subsequent harmonisation. In the meantime these test protocols have become indispensable in daily operations of the RAH expert system. One reason is that more and more RAH test protocols were developed by Rayonex Biomedical GmbH.

So much for testing. However, what's the procedure when a clear diagnosis is made and a useful set of RAH programmes is needed? Now the RAH contains many pathology programmes from a range of various areas. Only using the respective RAH pathology programme for harmonising would not do justice to the complexity of the disease and the therapist's demand and would neglect to observe many useful RAH programmes. In addition, it makes sense to use certain RAH programmes before or after a harmonisation. The RAH programmes 00.00 (analysis preparation) and 01.00 (vitalisation, complete) must e.g. always be placed at the start of a harmonisation programme. It was also clear that the repeated harmonisation of the RAH programme 01.00 (vitalisation complete) is beneficial at the end of the harmonisation.

Therefore, the new RAH compact programmes were developed. Herewith the therapist can refer to a praxis-proven compilation of matching RAH programmes for each RAH pathology programme.

The example to RAH programme 37.15 Lymphatic oedema will make this clear:

00.00 Analysis preparation	5 min.
01.00 Vitalisation complete	5 min.
02.00 Acupuncture meridians complete	5 min.
31.25 ATP production lymph	5 min.
35.10 Raising the defence capacity, basic programme	5 min.
36.00 Lymphatic system physiology complete	5 min.
37.13 Lymph flow disorder	5 min.

37.15 Lymphatic oedema	5 min.
31.50 Basic detoxification programme	5 min.
01.00 Vitalisation complete	5 min.

The 10 listed RAH programmes represent the praxis-proven compact programme for lymphatic oedema.

Users of a Rayocomp PS 10 can enter this set-up of RAH programmes into the device and use it for harmonisation. Of course the programmes can be stored permanently on a Green-Card and be of very practical use e.g. in the context of home therapy.

It is more convenient for users of a Rayocomp PS 1000 polar 4.0. The device with a 2017 software update offers the option to read the compact programmes at the push of a button and use them for harmonisation.

We wish you and your clients a lot of success with the new RAH compact programmes.
